This paper analyzes that although demands for political transformation commanded the world’s attention, those calls were largely motivated by unresolved socioeconomic issues. Demonstrators in the streets of Cairo and Tunis demanding bread, dignity, and social justice expressed widely held aspirations for basic economic rights, along with greater prosperity and equity. Almost seven years later, notable progress has been achieved in terms of public finance reforms. However, these reforms still have a long way to go to reduce disparities in the distribution of wealth within most countries of the region or narrow the development gaps between them. Countries in the Middle East and North Africa now face a stark choice between short-term retrenchment and resolute pursuit of the long-term reforms needed to secure their future economic prosperity. Forsaking important economic adjustments needed to strengthen inclusive growth and modernize the state and private sectors would set the region back, possibly for decades.

In Teaching with Poverty in Mind: What Being Poor Does to Kids' Brains and What Schools Can Do About It, veteran educator and brain expert Eric Jensen takes an unflinching look at how poverty hurts children, families, and communities across the United States and demonstrates how schools can improve the academic achievement and life readiness of economically disadvantaged students. Jensen argues that although chronic exposure to poverty can result in detrimental changes to the brain, the brain's very ability to adapt from experience means that poor children can also experience emotional, social, and academic success. A brain that is susceptible to adverse environmental effects is equally susceptible to the positive effects of rich, balanced learning environments and caring relationships that build students' resilience, self-esteem, and character. Drawing from research, experience, and real school success stories, Teaching with Poverty in Mind reveals \* What poverty is and how it affects students in school; \* What drives change both at the macro level (within schools and districts) and at the micro level (inside a student's brain); \* Effective strategies from those who have succeeded and ways to replicate those best practices at your own school; and \* How to engage the resources necessary to make change happen. Too often, we talk about change while maintaining a culture of excuses. We can do better. Although no magic bullet can offset the grave challenges faced daily by disadvantaged children, this timely resource shines a spotlight on what matters most, providing an inspiring and practical guide for enriching the minds and lives of all your students.

The first of the UN Millennium Goals was to reduce extreme poverty and in 2014 it was halved compared to 1990, and now the goal is to eradicate poverty and hunger by 2030. The reduction in poverty is, to a high degree, the consequence of the rapid economic development in a few countries, especially China, but in many countries around the globe poverty is still at a high level and is influencing societies’ overall development. It is against this background that this Handbook provides an up-to-date analysis and overview of the topic from a large variety of theoretical and methodological angles. Organised into four parts, the Handbook provides knowledge on what poverty is, how it has developed, and what type of policies might be able to succeed in reducing poverty. Part I investigates conceptual issues and relates concepts to people’s relative position in society and the understanding of justice. Part II shows how poverty has developed. It combines existing empirical knowledge with regional/national understandings of the issue of poverty. Part III analyses policies and interventions with the aim of reducing or alleviating poverty within a national as well as global context. It includes a variety of countries and examples. Finally, Part IV tells us what can be done about poverty; what instruments are available to end poverty as we know it today. This volume will be an invaluable reference book for students and scholars throughout the social sciences, particularly in sociology, social policy, public policy, development studies, international relations and politics.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.
