The Volatility Surface Explained

There are four related models that can be used to calculate the price of European style interest-rate options such as caps or swap options. The most common model is Black's model. In Black's model the forward interest rate follows the process $[dF = \sigma F dz]$ where Sdz is a Wiener process. In this model the future forward rates are lognormally distributed. The formula for the price of a call option on a rate is
