Magnetic The Art And Science Of Engagement

That's the premise of Magnetic: The Art and Science of Engagement, a new book based on a three-year research study of U.S. museums to understand what drives these high-performance institutions. Co-authors Anne Bergeron and Beth Tuttle began by analyzing a decade's worth of quantitative museum data (2000 to 2010).

Magnetic : the art and science of engagement / Anne Bergeron and Beth Tuttle. Format Book Published Washington, DC : The AAM Press, 2013. Description 224 pages : color illustrations ; 23 cm Other contributors Tuttle, Beth. Notes Includes bibliographical references and index. Contents

In this in-depth study of what makes a museum a successful organization, Anne Bergeron and Beth Tuttle look at so-called "magnetic" organizations, namely ones that combine a powerful internal alignment with a compelling vision so that they are able to attract critical resources, such as talented and committed employees, loyal audiences, engaged donors, powerful goodwill from the community at large, and the financial capital required to sustain programmatic excellence and growth. Magnetic: The Art and Science of Engagement analyzes six American museums: Children's Museum in Pittsburgh; Chrysler Museum of Art in Norfolk, Virginia; Conner Prairie Interactive History Park in Indiana; The Franklin Institute in Philadelphia; Natural Science Center of Greensboro in North Carolina; and Philbrook Museum of Art in Tulsa, Oklahoma. Each of these has embraced a shift in ideology and set a new course that has enabled them to achieve a positive reputation and a fruitful engagement with the community. This philosophy of magnetism provides a model not only for museum administration but also for all types of organizations--from corporations to nonprofits--that wish to maximize their involvement with their customers and the wider public while strengthening their own organizational infrastructure.

It is a strange and almost amusing fact that there should be at the same time, on the part of the general public, such a general acceptance of the existence of personal magnetism, on the one hand, and such an ignorance of the nature of this wonderful force, on the other hand. In short, while everyone believes in the existence of personal magnetism, scarcely anyone possesses knowledge of the real nature of the same, much less a working knowledge of its principles of application. This book gives you the key to the secret of personal magnetism, but it will still remain up to you to determine just what degree of success you will attain. The best tools and instructions as to how to use them are provided - but you will have to do the rest yourself. Success must and will be yours if you will follow the instructions carefully, persistently and perseveringly.

Provides a simple explanation of the differences between magnetic and nonmagnetic materials, and includes examples of their uses in everyday life.

Get ready to explore the world of science through art with these open-ended experiments! Science Arts introduces the scientific magic of crystals, light, constellations, plants, and more through creative art projects. Each of the more than 100 hands-on projects is designed to help children discover essential science topics through a creative process unique to each individual. Concepts include light and sight, motion and energy, and nature and ecology. Science Arts provides both teachers and parents with a diverse range of activities for making science creative, fun and fascinating. The possibilities are wide open and endless!

For the general public, magnetism often seems more the province of new age quacks, movie mad scientists, and grade-school teachers than an area of actual, ongoing scientific inquiry. But as Ronald T. Merrill reveals in Our Magnetic Earth, geomagnetism really is an enduring, vibrant area of science, one that offers answers to some of the biggest questions about our planet's past—and maybe even its future.

Magnetic: The Art of Attracting Business is a look at how consistently successful businesses are able to attract a steady and ever-increasing flow of customers. This innovative text examines a range of simple, powerful strategies that businesses of any size or type can use to attract new customers. The key is to do those things that harness the power of the single most important factor in buying decisions: positive word of mouth and referrals from happy existing customers. Magnetic businesses are intentional, strategic, and focused on creating positive experiences that become the stories their customers tell about them. Whether on the internet or face to face, it's what satisfied customers say

about you that is the most powerful driver of growth for your business. Becoming Magnetic and attracting business, truly is an art, rather than a science, because every business is different, and uses a unique combination of strategy, people, and purpose to achieve success and growth. There is no one-size-fits-all formula, but with creativity and focus, any business can create a powerful revenue growth engine that continuously works to build and sustain success. Learn how to match successful growth strategies with your people, purpose, and culture to create your own unique 'magnetism' to attract business. Discover the simple, powerful keys to growth used by a range of market leading businesses, from a snowboard manufacturing startup company and a website design professional to a minor league baseball team and an family owned upscale grocery store. All of them utilize ideas that you can put to work immediately in your business to become Magnetic. Create a magnetic mindset in your people that leads not only to happier customers who refer others to you, but to more satisfied employees who help attract and recruit great new employees to keep your momentum going. Simplify and clarify how you think about your business to have your entire team become more focused, efficient, and effective in doing those few vitally important things that matters most in driving growth and sustaining success.

An introductory guide to global magnetic field properties, Earth Magnetism addresses, in non-technical prose, many of the frequently asked questions about Earth's magnetic field. Magnetism surrounds and penetrates our Earth in ways basic science courses can rarely address. It affects navigation, communication, and even the growth of crystals. As we observe and experience an 11-year solar maximum, we may witness spectacular satellite-destroying solar storms as they interact with our magnetic field. Written by an acknowledged expert in the field, this book will enrich courses in earth science, atmospheric science, geology, meteorology, geomagnetism, and geophysics. Contains nearly 200 original illustrations and eight pages of full-color plates. * Largely mathematics-free and with a wide breadth of material suitable for general readers * Integrates material from geomagnetism, paleomagnetism, and solar-terrestrial space physics. * Features nearly 200 original illustrations and 4 pages of colour plates

"ScienceArts" builds upon natural curiosity as children experience and explore basic science concepts as they create over 200 beautiful and amazing art experiments. Projects use common household materials and art supplies. The art activities are open-ended and easy to do with one science-art experiment per page, fully illustrated and kid-tested. The book includes three indexes and an innovative charted Table of Contents. Suitable for home, school, museum programs, or childcare, all ages. Kids call this the "ooo-ahhh" book. Examples of projects include: - Crystal Bubbles - Dancing Rabbits - Building Beans - Magnetic Rubbing - Stencil Leaves - Magic Cabbage - Marble Sculpture - Immiscibles - Paint Pendulum - Ice Structures - Bottle Optics - Erupting Colors - Chromatography 1993 Benjamin Franklin Gold Award, Education/Teaching/Academic 1993 Benjamin Franklin Silver Award, Interior Design 1993 Benjamin Franklin Silver Award, Book Cover 1993 Washington Press Communicator Award, First Place Winner, Non-Fiction Book

From the Coke and Mentos fountain makers who found initial fame via Maker Faire and YouTube (more than 150 million views!) comes this collection of DIY science projects guaranteed to inspire a love of experimentation. Fritz Grobe and Stephen Voltz, also known as EepyBird, share their favorite projects: a giant air vortex cannon, a leaf blower hovercraft, a paper airplane that will fly forever, and many more. Each experiment features instructions that will take users from amateur to showman level—there's something here for all skill levels—alongside illustrations, photographs, and carefully explained science. How to Build a Hovercraft is guaranteed to engage curious minds and create brag-worthy results!
