Many chapters conclude with "logical exits," the points at which the collection in a condition that allows you to leave it for the next curator to take over. A common issue is that time frames are often so tight that the target of having the collection in good shape at the end of a contract or at a fixed date can't be met. Another common scenario may be that other projects become more important and you have to stop working on the collection, which might sound familiar to many directors of small museums. "Logical exits" are the points you can do this without risking that everything you've done so far or since the last "logical exit" was a waste of time. For contractors those "logical exits" might serve as orientation points when negotiating the work that has to be done on the collection.

Museum curators enter the profession with a specialist subject qualification and yet at some point in their career, many curators find themselves in charge of a range of collections outside of their expert knowledge. Interpreting, curating and caring for mixed collections demands of curators a wide range of knowledge and understanding. The Curation and Care of Museum Collections is designed to give curators the fundamental information and confidence they need to manage and care for all of the collections within their responsibility, regardless of their previous training and experience. Comprising two sections – Museum Collections, and Collection Development and Care – the chapters cover archaeology, art, history, military and natural sciences collections, as well as heritage properties. Every chapter in the book is focused on one type of collection, but all chapters in the collection management section contain advice on topics such as organisational philosophy, documentation, legal issues and materials in order to provide a useful and comprehensive guide to managing collections. The collection care section is structured in the same way, considering the issues of storage; display; handling; moving; packing; housekeeping; health and safety; emergency preparedness; and pest, pollution, environmental, light and vibration management. The contributors to this book are experienced museum professionals, each with their own specialism and a deep understanding of what it means to work in the context of mixed collections. Providing a highly practical guide, The Curation and Care of Museum Collections is essential reading for curators working in all types of museums, galleries and heritage sites, and for students of museology courses around the world.

Johnson, VP, Custom Solutions, DigitalFish All too often, software development is deemed unmanageable. The news is filled with stories of projects that have run catastrophically over schedule and budget. Although adding some formal discipline to the development process has improved the situation, it has by no means solved the problem. How can it be, with so much time and money spent to get software development under control, that it remains so unmanageable? In Managing the Unmanageable: Rules, Tools, and Insights for Managing Software People and Teams , Mickey W. Mantle and Ron Lichty answer that persistent question with a simple observation: You first must make programmers and software teams manageable. That is, you need to begin by understanding your people—how to hire them, motivate them, and lead them to develop and deliver great products. Drawing on their combined seventy years of software development and management experience, and highlighting the insights and wisdom of other successful managers, Mantle and Lichty provide the guidance you need to manage people and teams in order to deliver software successfully. Whether you are new to software management, or have already been working in that role, you will appreciate the real-world knowledge and practical tools packed into this guide.
