Psychological testing, also called psychometrics, the systematic use of tests to quantify psychophysical behaviour, abilities, and problems and to make predictions about psychological performance. The word "test" refers to any means (often formally contrived) used to elicit responses to which human behaviour in other contexts can be related. When intended to predict relatively distant future behaviour (e.g., success in school), such a device is called an aptitude test.

and financial assets for adults aged 65 years or older and disabled adults and children. Both programs require that claimants have a disability and meet specific medical criteria in order to qualify for benefits. SSA establishes the presence of a medically-determined impairment in individuals with mental disorders other than intellectual disability through the use of standard diagnostic criteria, which include symptoms and signs. These impairments are established largely on reports of signs and symptoms of impairment and functional limitation. Psychological Testing in the Service of Disability Determination considers the use of psychological tests in evaluating disability claims submitted to the SSA. This report

critically reviews selected psychological tests, including symptom validity tests, that could contribute to SSA disability determinations. The report discusses the possible uses of such tests and their contribution to disability determinations.

Psychological Testing in the Service of Disability Determination discusses testing norms, qualifications for administration of tests, administration of tests, and reporting results. The recommendations of this report will help SSA improve the consistency and accuracy of disability determination in certain cases.

is a narrative told from a particular perspective. A proverb from Africa, 'Until lions have their own historians, tales of the hunt shall always glorify the hunter,' captures this best. Most of the scholarship about psychological assessment comes from very specific nationalities and cultures, which does not truly reflect the diversity and breadth of histories pertaining to the field. Covering 50 countries, this collection gives voice to those that have previously been under represented and sometimes marginalized. This book not only describes important moments in psychological assessment from around the globe, but also equips readers with the tools to map the future of psychological assessment across nations. The terms interactive and dynamic would never have been associated with psychological and psychoeducational assessment a generation ago. They have currency now because of widespread dissatisfaction with the normative, standardized testing model, criticism of theoretical concepts of intelligence, recognition of abuses of standardized intelligence testing, and frustration with prediction and classification as primary goals of assessment. It is almost certainly true that public policy concerns propel scientific activity far more often than science propels public policy! In the case of psychological assessment, public policy concerns have arisen in the last 20 years primarily around issues of possible

"discrimination" against members of ethnic minorities. At the same time, there has been a resurgence of dedication to "excellence in education" goals. These concerns have led to such extreme measures as prohibition of the use of standardized intelligence tests to determine school placement decisions, especially for minority children. They have led also to a search for alternatives to standardized, normative testing. The chapters in this volume represent a variety of answers to this need.
